Tools Usage

WHAT IS IPSM?

- The Integrated Public Service Management System (IPSM) is a centralized digital platform designed to manage and analyze multiple public services through a single unified system. Instead of handling education, healthcare, transport, and municipal services separately, IPSM integrates them into one management framework.

Integrated Public Service Management System

OBJECTIVES

- To integrate multiple public service departments into one centralized system.
- To provide a simple platform for citizens to submit and track service requests.
- To store all service-related data in a structured and relational database.
- To analyze departmental performance using data analysis tools.
- To support authorities in decision-making through reports and visual analysis.
- To demonstrate effective integration of multiple ICT tools.

IPSM

Integrated Public
Service Management

Tables

- Departments Table**
Stores information about all departments.
- Requests**
Stores all service requests submitted by citizens.
- Services**
Stores the list of service offered by each department.
- Status**
Stores the status of requests (Pending, Resolved, etc.).

Queries

- Department Performance Summary**
Shows how each department is performing based on requests handled.
- Request per Service**
Displays the number of requests for each service.
- Requests per Department with Status Breakdown**
Shows requests grouped by department and their statuses.
- Total Request**
Shows the total count of all requests.

Queries

- Request per Service**
Displays the number of requests for each
- Requests per Department with Status Breakdown**
Shows requests grouped by department and their statuses.
- Resolved vs Pending Task**
Compares the number of resolved and pending requests.
- Total Request**
Shows the total count of all requests.

Forms

- Admin Form**
Used by the administrator to manage and monitor the system.
- Navigation Form**
Provides easy navigation to all forms, queries, and reports.
- Submit Request Form**
Used by users to submit new service requests.

Reports

- Citizens_Requests**
Displays a report of requests submitted by each citizen.
- Department Performance Summary**
Shows department-wise performance in report format.
- Requests**
Displays a detailed list of all requests.

Macros

- Email Sender**
Sends automated emails from the system.
- Export Department Report in PDF Form**
Exports department performance report
- Export Request**
Exports request data to an external file.

TOOLS USED: ACCESS FOR BACKEND

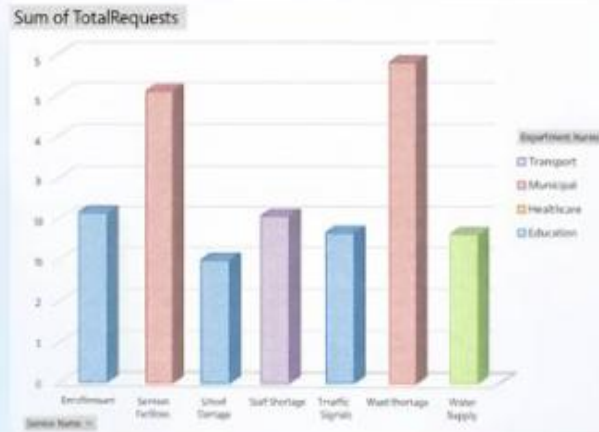

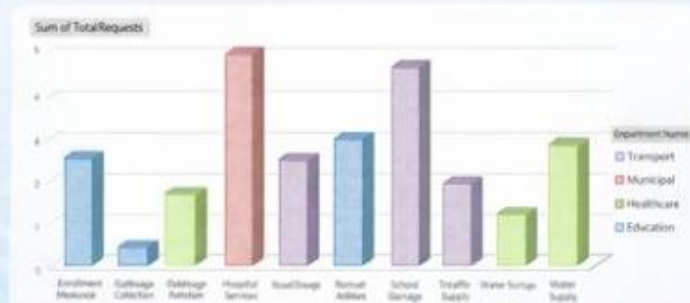

- MS Access is used as our primary database, where we have multiple tables to store our data.
- We have tables for each department, requests and their status.
- We have also queries for analyzing each departments performances.

Microsoft Excel

Microsoft Excel is a powerful spreadsheet tool used for organizing, analyzing, and visualizing data.

- ✓ **Organizes** data in tables for easy input and management
- ✓ **Analyzes** data using formulas and functions
- ✓ **Visualizes** data with charts and graphs

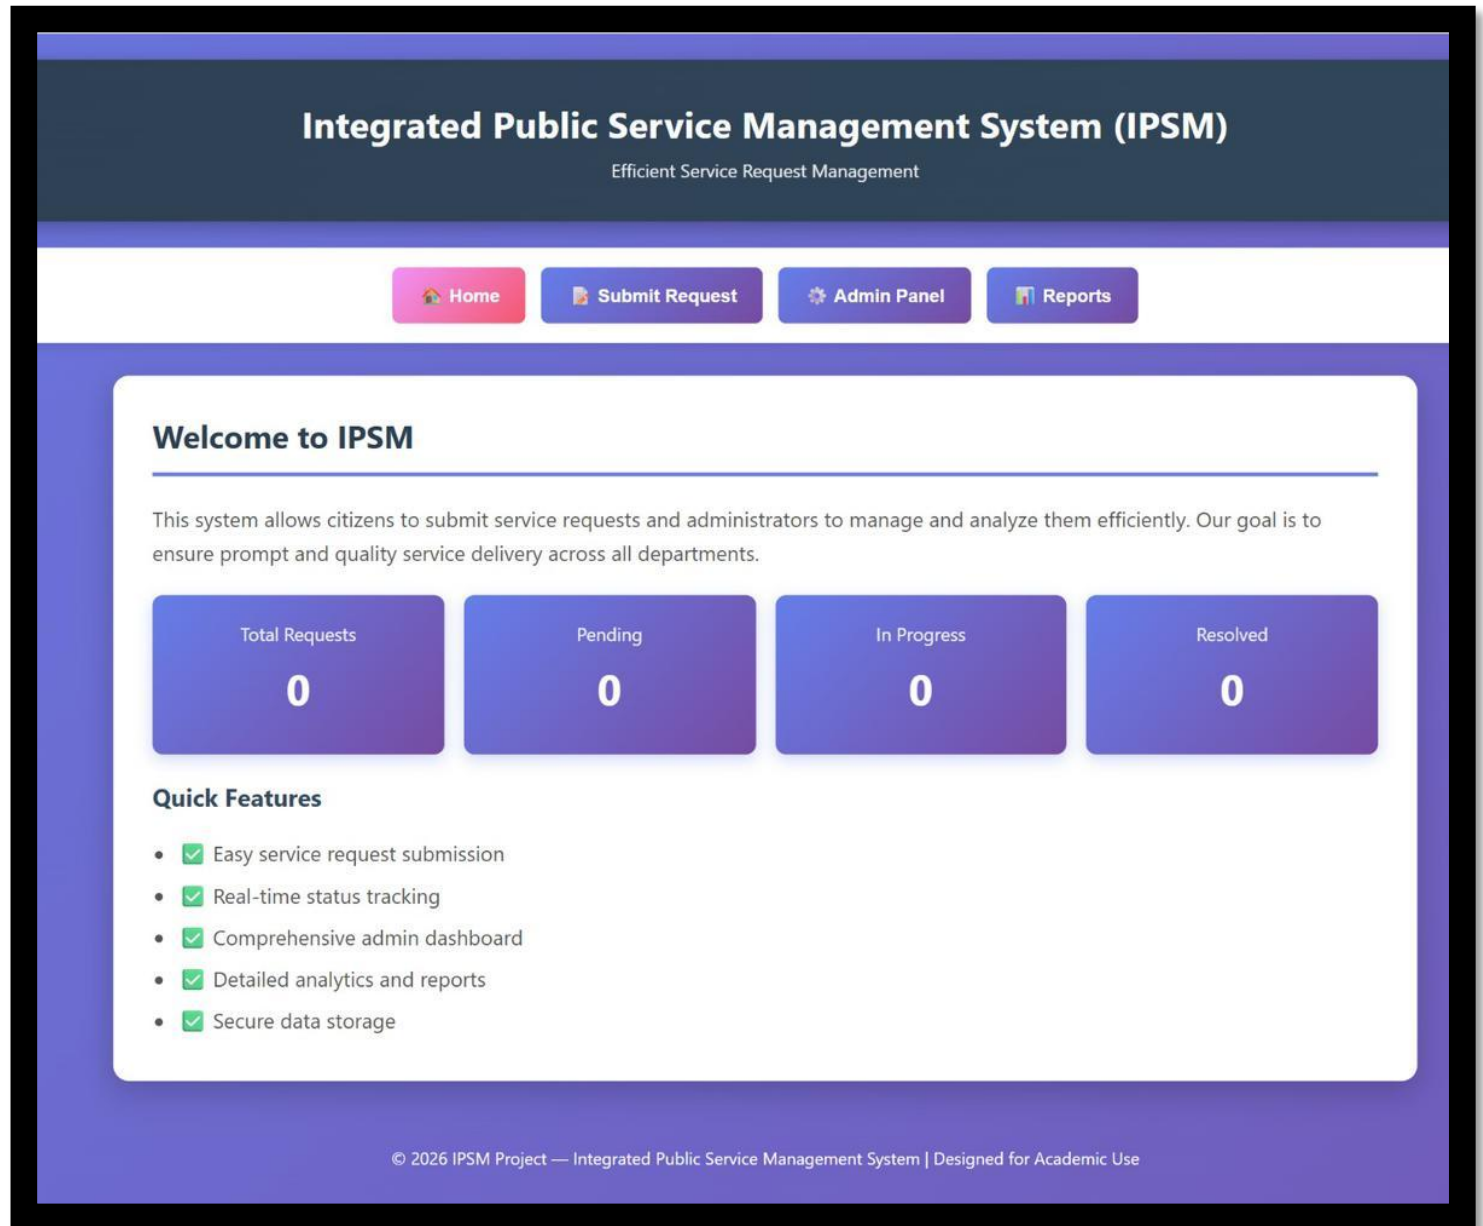

MS EXCEL:

- We used Excel for our data visualization and data formatting.
- All the data stored in the database is exported into excel, where we apply different formulas and integrated different charts so that the data can be visualized and we can see the overview of the results.

HTML FOR FRONTEND HOMEPAGE:

- The user navigates to the homepage of our system, where they can see multiple departments and requested associated to each department.

Submit Service Request

Citizen Name *

Email Address *

Phone Number *

Service Category *

Request Date *

Location/Address *

Description *

Submit Request

SUBMIT REQUESTS

- The user navigates to the submit request tab, to submit the request.
- This section prompts the user to fill in some details about their request and also mention the department to whom they are submitting the request.

ADMIN PANEL

- Upon updating the status of data into the form, the admin can submit it, and a confirmation message would appear on the screen.

Admin Panel

Request updated successfully!

REQ-1767537869435-143	Zarish Shahzad	Enrollment Issues	Resolved	2026-01-04	EditDeleteView

POWERPOINT

- The presentation about our project is build using PowerPoint.
- The presentation includes an overall view of our project and the tools we used in our project.

MS WORD:

- MS Word is used to format a detailed report about our project.
- It includes working of all the modules that we build along with their detail description on how each module works

GITHUB:

- We have used GitHub as our central repository to store and manage our both frontend and backend code.
- It allowed us to view and update the code in real-time and help our team to work on it simultaneously.

Thank You!
